
Subject: GCTP code 198?

Hey everyone,

I'm trying to use map_proj_init using some of the features of the latest version of GCTP. Mainly the Equal Area Cylindrical projection that was updated in HDFEOS 2.8.

http://hdfeos.gsfc.nasa.gov/hdfeos/software/HDFEOS_2_8/HDFEOS2.8v.100_0303_EASEgrid.pdf

Has anyone hacked this in? I found it easy enough to change map_proj_init stuff, but the map_proj_forward, must be already compiled? Would there be a(n easy) way to "link" the latest GCTP libraries with the existing IDL?

Should this be a feature request to IDL?

Thanks for the help/suggestions.

Matt
