Has anyone written a PV-WAVE (or IDL if it doesn't use a routine that exists in IDL only) routine that plots graphs (2d data ie X vs Y) that will also plot error bars on the points in both X and Y dimensions. (The standard PV-WAVE routine only plots error bars in the y direction.)

Please E-mail answers as news is a bit flaky here at the moment, so we don't get all the articles.

Thanks in advance,  
John Black.
