David - a catalyst is something that speeds up a reaction. When are we going to get a look at your catalyst library so that we can give you speedy reactions?

Dick French

PS, I'm on sabbatical this year, too, and not getting as much done as I had expected, so this question is partly in jest!

Oh, it is all ready to be released. I'm just waiting because I want to release it simultaneously with my new book on object programming in IDL. :-)

Cheers,

David

P.S. In other words, I wouldn't be holding my breath. :-)

P.S.S. Actually, I have been using the Library quite a lot, and clients have been using it successfully. But if I released it to the public, I'm pretty sure I could forget about tennis and become a one-man, unpaid support person. The alternative, of course, is to become a one-man, unpaid technical writer, but that doesn't sound all that attractive either. :-(
