Hi

I want to write a batch script the read the first 7 SD's from an hdf file, and then export those bands to an ENVI format file with the same basename as the original hdf file. I can get the hdf files open in IDL, but I can't seem to get around needing to pick the SD's I wanna include in the ENVI file using a dialogue box. Wow, that'll blow a hole in batch-ness of the whole thing! I have about 400 hdf files I need to process this way.

Someone has to have been through this before. Any help would be greatly appreciated.

Cheers. Neil.
