Subject: Writing output files with ION/Script Posted by Wayne Landsman on Tue, 18 Jan 2005 20:33:08 GMT View Forum Message <> Reply to Message

The ION page on RSI's website (http://www.rsinc.com/ion/) gives the wavelet demo (http://ion.researchsystems.com/IONScript/wavelet/). One nice feature of this demo is the ability to save the output image as a postscript (or EPS) file. However, as far as I can tell from the ION/Script documentation the only available output image formats are PNG, PNG24 and JPEG24. The source code is not available for this site -- perhaps they use some non-ION/Script elements to get the postscript output?

What I would really like to do is be able to output a binary (FITS) file after the user has modified an image.

Thanks, -- Wayne Landsman
