
Subject: Array of associated variables?

A brief question: Is it in some way or another possible to make an array of associated variables? The examples below don't work but perhaps there is some other way?

```
-----  
for i=1,n do begin  
  a=assoc(...)  
  if n_elements(all) le 0 then all=[a] else all=[all,a]  
endfor
```

```
-----  
a=assoc(...)  
all=replicate(a,n)  
-----
```

Thanks for any help
