
Subject: IDL on SuSE

The only supported Linux flavors according to RSI's documentation are Redhat versions. I can't think of any reason why IDL wouldn't work on SuSE, but was wondering if there would be any issues trying to get IDL installed and running on a SuSE box. Anyone running IDL under SuSE? Were there any hoops to jump through to make it work, or was it nice and smooth? The specific combination I'm interested in is IDL 6.1.1 and SuSE 9.1.

TIA,
Mike
