Anyone have this problem (ENVI 4.1, IDL 6.1, WIndows 2000)?

When I use ENVI_SETUP_HEAD to write a standard ENVI header, the keyword INFO is ignored, i.e. the data that I assign to it doesn't appear in the ENVI file header.

Thanks

Mort Canty

Well, I just found out by experimenting that the INFO data are volatile.

If I use ENVI_FILE_QUERY with the H_INFO keyword during the same IDL session, I can access them. Otherwise uh-uh. Evidently RSI has a proprietary interpretation of the phrase "setup head" :-)
