Dear All,

I run into the following error when I try to output my Rois to ASCII files in ENVI4.0 (windows 2000 PC):

Output ROI to ASCII: An error has occurred during processing

Error: "Negative position argument not allowed. Position: -3463760, Unit: 109, File: D:\geo\glen01." The result may be invalid.

If you happen to have the same error before, or you know what's going on, or how to fix it, could you share your expertise and experience with me?

Thanks,
Jenny
