Have you tried to process each file seperately? If the code can run successfully each time, there seems no errors should occur. But you should delete all the CLOSE and FREE_LUN lines in the loop.

Tian.

Hello Tian,

Thank you for your reply.

Yes, I have indeed tried to process each file separately and the program runs just fine. I didn't have the CLOSE and FREE_LUN lines in my original code but I still got the same error. I thought putting them in might help.

Do you have any other suggestions?

Thanks very much for your time,

Vinit
