
Subject: Converting INT to STRING out of space...

If I want to save a file within a cycle and I want the name of the file to have the number related to the cycle, I have a problem that maybe someone in here have faced.

Apparently there is no way that I can eliminate a space in a string made of an integer variable. Try:

```
number = 3  
aux = STRCOMPRESS(STRING(number))  
file = 'saving'+aux+'.dat'
```

And, this way the variable file will be 'saving 3.dat' with a SPACE inside the string. Any tips of how I can avoid this space?

Greetings,

Nuno
