Hi There,

I want to do some math calculation with the coordinates associated with an ENVI ROI file, the (x,y) or (sample,line). I googled this wonderful group and learned how to open an ENVI ROI and get its index. I guess there is another function to read the coordinates of the ROI, maybe quite straight forward, but I'm new with both IDL and ENVI batch processing, can't figure out how. Could you give me a hand upon this?

Thanks, Jenny
