
Subject: Setting CLASSPATH for IDL-Java bridge session

Is there any way to programmatically set the JVM Classpath for an IDL-Java bridge session? I've tried a SETENV, 'CLASSPATH=...' and I've also tried instantiated a java.lang.System object and set the property java.class.path. I then tried to instantiate my own java object and it doesn't find the class. The only way I seem to be able to set the classpath is via the .idljavabrc. Thanks for any advice.

David
