As a newbie to IDL, one is often confronted with various problems. It is absolutely normal to ask questions. But try to find the solution yourself first. Whenever I encounter a new problem, I will firstly search the IDL help document, then this discussion group, then Google the Web, ... To ask question here is the last choice.

There are some excellent places to look on the web for information on IDL. <http://www.dfanning.com/> is probably the best. And I would also recommend that you read his book (you can order it on that website).

One thing that may help you is to search through the google groups <http://groups-beta.google.com/group/comp.lang.idl-pvwave?hl=en>

There is a button "search this group" that you can use to restrict your search to just the IDL newsgroup. It is very helpful for finding answers to your questions.

Cheers,

bob
