Did you consider trying google? Here, I'll help you:

  http://www.google.com/search?q=IDL+FITS

Also, an IDL-specific search engine:

  http://www.astro.washington.edu/deutsch/idl/htmlhelp/index.h tml

But you can even make google IDL-specific by adding "filetype:pro"
to any query:

  http://www.google.com/search?q=IDL+FITS+filetype:pro

And then, of course, there is the archives to this group...

  -k.

FITS I/O is part of the IDL Astronomy User's Library. Once installed from

http://idlastro.gsfc.nasa.gov/homepage.html

you can read and write FITS easily.
