Hi Everybody..

I have a little problem in ENVI and IDL link .... I am calling
ENVI_REGISTER_DOIT procedure from idl. I am using image to map
registration. i m new to this remote sensing and idl and envi.
Here in this procedure there is one argument called pts where points
should be given along with map coordinates. here i m passing this
information.... but still it does not work...it gives error "array
dimension must be greater then 0"
and here one more thing is that i have x and y location and its
lattitude and longitude . is there any other way to register this
file?
