hello!

I'm trying to create a nice-looking colour plot as jpg for my presentation.

Following various advice, I first make the plot twice as big as I want it and thereafter use tvrd and tvimage to display it half the original size so that the plotting symbols, numbers and characters appear nice and smooth. But the color information is lost! Any idea how I can solve this?

Help is very much appreciated!

```
set_plot,'x'  
window,xsize=1200,ysize=1200  
!p.font=1  
device,set_font='Helvetica',/TT_font
```

[plotting...]

```
im=tvrd( )  
window,1,xsize=600,ysize=600  
tvimage,rebin(im,600,600) <---- greyscale :-(
```
