Subject: Style guide for programming in PV-WAVE
Posted by black on Wed, 19 Oct 1994 15:28:13 GMT

We are going for quality certification (BS5750/TickIT/ISO900X/EN29000). As part
of this we need a style guide for programming in PV-WAVE. I was wondering if
there is in existence we could either refer to or we could use as a starting
point. I know about chapters 10 & 11 of the Programmer's Guide volume of the
documentation for PV-WAVE version 4.2. Which is about the only official thing
I know about.

Thanks in advance,
            John Black.

Subject: Widgets under Pv wave
Posted by buteau on Wed, 19 Oct 1994 16:59:31 GMT

Has somebody developped widgets under Pvwave , like Wgsurfacetool, and all the other Wg...
routines , but more complete than this poor ones given with the 4.2 version which have very few
options (not even a print button -- > So that it is useless for a stupid user).

Thanks
