Subject: Possible Mac OS Bug with FIX. Posted by David Fanning on Wed, 11 May 2005 16:49:24 GMT View Forum Message <> Reply to Message

Folks,

I have a report of a possible bug this morning with the Mac OS operating system. It seems that the FIX function, when used with the offset parameter does not produce reliable values.

Here is an example:

```
tmp=bytarr(20)
tmp[15]=5
print, fix(tmp[15]), fix(tmp,15)
     1280
```

Can anyone confirm that this is or is not a problem in IDL 6.1 on the Mac OS operating system?

Thanks,

David
