O.k. you linux people. I've got a question for you.

I was intrigued by the itools challenge. I looked at them when they first came out and then ignored them promptly. But now, I thought I'd take another peek. So I fired up my idl 6.1 on my suse 9.0 box my result is below. So my question is, do itools startup on your linux box? (The suse compat is installed on my machine)

Thanks

Matt

savoie@snowblower:~> idl
```

```
IDL Version 6.1 (linux x86 m32). (c) 2004, Research Systems, Inc.
```

```
Installation number: 100-646.
```

```
Licensed for use by: University of Colorado
```

```
*****NOTE FOR RedHat Enterprise USERS*****
```

```
Some functionality in this IDL release requires the libstdc++  
compatibility libraries to be installed. To check if the libraries  
are already installed, execute 'rpm -qa | grep compat', and look for  
"compat-libstdc++-<version_number>". If this is not listed, install  
the appropriate RPM for your distribution (from your install CD's).
