Hi,

you could do the following:

```
IDL> plot, indgen(100), ytitle = string("_!c!7q!X")
```

The "\_" draws the bar, "!c" does a carriage return, and "!7q!X" draws the "rho" and returns to normal font. Alternatively

```
IDL> plot, indgen(100), ytitle = string("_!c" + textoidl("\rho"))
```

does the same.

It is not perfect, I know, the bar is a bit too high above the rho, but at least it works.

Regards,

Peter

One other option:

```
plot, indgen(10), indgen(10), ytitle='!S!7q!R!A-'
```

-David
