
Subject: Google Desktop Search Plug-in for .pro files

Hi all,

I've been happy with Google Desktop Search (<http://desktop.google.com>) for a while now and I have just discovered a plug-in that will lets you easily add IDL's ".pro" extension (or any other text file extension you like) to the mix.

Find "Larry's Any Text File Indexer" written up at:
<http://desktop.google.com/plugins/indexitall.html>

It has already indexed some of my .pro files so I can see where to start replacing "Help, Calls=x" with "x = Reverse(Scope_Traceback())" :-)

Enjoy!

Cheers,

--
