I've just installed IDL6.2 on MAC OSX 10.4. When I try to run the demo, I get the following error message:

IDL Version 6.2, Mac OS X (darwin ppc m32). (c) 2005, Research Systems, Inc.

```
IDL> demo
% Attempt to call undefined procedure/function: 'DEMOOBJ__DEFINE'.
% Error occurred at: DEMO      581
 /usr/local/rsi/idl_6.2/examples/demo/demosrc/demo.pro
%      $MAIN$
% Execution halted at: $MAIN$
```

Any suggestions?

Thanks,
Dick French
