Hi, I am trying to output a 3D image file in Postscript, but for some reason my output color image does not appear in its original color. The colors turned pinky. The following are part of my code:

```
SET_PLOT, 'ps'  
  
DEVICE, file=filename, /color  
  
; Write the image to the file:  
;TV, image3D, TRUE=1  
; Close the file:  
DEVICE, /CLOSE  
set_plot,'win'
```

If someone could please let me know what I did wrong, that would be really appreciated. Thanks.

Thanks for your help. The problem however still exists. The color is still pretty off. I am suspecting the background also contributed to the issue. In the 3D view I have, my background was dark grey, but in this PS file, the background is blue. That might make a different. Nevertheless, the PS image quality does not look too great. Any ideas? Thanks a lot for your time and help.

Did you try to reload the color table AFTER switching to the PS device?
