
Subject: Another IDL 6.2 Project Problem

Folks,

Some of you may remember my struggles trying to get a breakpoint set in an IDL 6.2 project. I eventually discovered a way around that problem and got things working correctly.

Now I've run into *another* problem. It seems I can't add another file to the project! :-(

I'm retreating to IDL 6.1. There is really nothing in IDL 6.2 I'm interested in anyway. This is the first time in a long time that I've thought a new release has gone backwards.

Cheers,

David
