IDL 6.2 doesn't know about all the nice iTool macros I defined in IDL 6.1, and I can't find them. I don't use the IDLDE. Does anyone know where I can hunt that information down and migrate it over by force? I'm on a Mac so pref_migrate doesn't work for this, I think.

Josh,

You can find the iTools macros in this directory:

<HOME DIR>/.idl/rsi/itools-2-idl_6_1/macros

Then just copy the macros over to the equivalent 6.2 directory (the macros are stored in sav files). Actually, you might want to create the 6.2 directory by saving an empty macro first from an itool, so IDL creates the directory for you.

Dave
