Hi

Thanks those that helped with the question on plotting and colors...i have another question on plotting which i would be grateful for help with...

i have plotted a graph, with a number of variables in different colors on the screen, with some xyouts to say which line is which. this looks fine on the screen, but when i plot to a ps file by doing

```
SET_PLOT, 'PS'  
DEVICE, FILENAME='myfile.ps', /LANDSCAPE  
plot etc  
device,/close
```

only the black line seems to come out and the xyouts are all printed on top of each other...

any ideas

thanks

ruSS
