Currently set to a paltry 32 lines. Can't find a setting in the IDLWAVE manual to change this, sure of course that one exists. Using an older version of IDLWAVE right now, when I see the Unix guys they haven't had their coffee yet, and I'm not going to ask them until they do, if you know what I mean. But if the buffer exists, I'm sure the setting exists, too, I just can't find it.
