Subject: IDLgrWindow Setting - Why render image gets erased? Posted by Victor[1] on Tue, 01 Nov 2005 01:06:17 GMT

View Forum Message <> Reply to Message

Hi all,

After swimming through IDL Documentation and messg boards, I couldn't find an answer to the following (and I'm surprized this hasn't been discussed .. or maybe I couldn't find it - it looks fundamental)

# When you render an image in IDLgrWindow object, then if you try to maximize the window/resize (interactively with mouse clicks), the image disappears.

Thanks in advance

- Victor

P.S. Setting RETAIN = 2 helps with leaving the image rendered if you switch between windows, however, doesn't solve the above problem.
