Hi, I am dealing with IDLgrView object named oView, oView holds a lot of other objects. I am trying to get access to those objects by using oView->GetByName function as follows:

oView -> GetByName, oTop=oTop
oTop -> GetByName, oGroup = oGroup
oGroup->GetByName, oBox = oBox
oBox -> SetProperty, thick=3

oTop was added to oView and oGroup was added to oTop, maybe the chain GetByName structure is not necessary, but i received an error message:

"Attempt to call undefined method: 'IDLGRVIEW::GETBYNAME'."

why is GetByName not defined in IDLgrView oView?

Does anyone know why? Thanks for your time.
