Has anyone tried running IDL 6.2 on Red Hat Enterprise 4? Looks like the kernel has also been updated which could spell trouble.

Thanks,
-P

IDL 6.0!? You have problems you just haven't discovered yet. :-)

Cheers,

David

6.2 appears to run perfectly ok on RHEL AS4. The current kernel is 2.6.9-11.ELsmp; not quite the latest, but I don't expect running the latest will make any difference. This is an Opteron system, and I have tried both the x86 and x86_64 versions of IDL.
