I don't know how to do this withing IDL. I would love to, having a
bunch of "Graphics produced by IDL" open in gv isn't helpful.

If you are on unix/linux/macosx, you can try the following (all on one
line):

sed 's/^\(%%Title: *\).*$/\1Created by MAKE_TEST_PLOT_27, 11/1/06,
orginal name: fred.ps/' < original.eps > original-withtitle.eps

(wrap it in a spawn command, using dynamic titles, and filenames etc).

Thanks Maarten - in the end I did a similar version, but a bit clunkier
due to my somewhat amateurish perl skills!

cheers,

   Ben

Note that my script contains a fatal flaw.

Use the following instead:

sed 's;^\(%%Title: *\).*$;\1Created by MAKE_TEST_PLOT_27, 11/1/06,
orginal name: fred.ps;' < original.eps > original-withtitle.eps

(I tested on a file without slashes in the new title, and then replaced
my title with the one you gave).
