"XROI, kneelmg, REGIONS_OUT = femurROIout, STATISTICS = femurStats"
gives me ROI region from femurROIout selected from user. I can do
"XROI, kneelmg, REGIONS_IN = femurROIout, STATISTICS = tibiaStats" to
define the same region for a different image.

I need statistic data for same region from different images. My
question is how I can do this without opening XROI window. Once user
defines a ROI, program automatically retrieve the data from the rest.

thanks in advance
