[impressive list of tasks removed...]

What format is your image - or are you processing raw radar data? Is
your data geo-referenced in any way?

If your data are image files at one of the formats supported by IDL, you
may read the image into memory using image_read or similar. Search the
docs for names starting with read.

Good luck :)

Cheers, Jan

The Data is a Raw Data from the Radar.. and also to say the Image is a
3D image and i have to read the File into IDl and then Converyt into 2D

> From the Converted 2D image i have to find the Attributes.. that means
from a 2D image i have to Find the Attibutes.

I want to Find the Peak of the Mainlobe .. the width of the Mainlobe at

the Half of the Height?
and also the Peak of the Sidelobes that are Present.
