Anybody can bring some "idljavabrc" file configured to work on windows.

Thanks in advice.

You can read all about linking to Java in the Using the Java Bridge section of the IDL External Development Guide (edg.pdf in the on-line documentation that comes in the IDL distribution). It describes 5 or 6 simple examples that are in the /externals/objbridge/java directory of the IDL distribution.

I've just worked through all these examples myself this week, and they all work as advertised.

Cheers,

David
