
Subject: Middle mouse button under Windows?

We're running RSI IDL 3.6.1 under windows 3.1.1 and have run into the middle mouse button problem. Unfortunately our laptops have only a two button trackball and these emulate the 1st and 3rd buttons of a UNIX mouse. Mac's usually have an emulation for the middle and right buttons from the keyboard, and I understand Windows has one for the middle (using both buttons down together). This is not honored by IDL - how do you access the middle mouse button under IDL using a two-button mouse?

Thanks.
