Hi all,

I've downloaded IDLdoc from RS web page and restored manually the file idldoc.sav in my idl session. In my computer I have a trial version of IDL 6.1, so when I type: idldoc, root= '/myDirectory' it starts the documentation creation, but stops before the end, and shows a message telling me that it is not going to work on a demo version. All right, I've done the same in a remote computer with a complete version of IDL, but all I got was this message:

% IDLdoc failed on error: %N%s

My directory structure is as follow:

```
../idldoc/product__define.pro
../idldoc/lib/idldoc.sav
```

what I am doing is cd to my root directory and type the following:

```
cd ../idldoc/
```

```
idl
```

```
restore, '../idldoc/lib/idldoc.sav'
```

```
idldoc, root='../idldoc/'
```

the ../ is just an abbreviation for my whole directory structure (something like /home/myuser/examples/)

Anyone?

Thank you all

Vinicius
