
Subject: How to call an IDL procedure from a DLM

Last week I posted a request for help, since my DLM produced a number of "Stopped on unknown instruction" errors. After some debugging, I found that the problem resides in IDL_ExecuteStr, which is not usable in DLMs since it has been meant to be used only with Callable IDL.

However, I still need to call an IDL procedure from my DLM. I looked for a IDL_CallProc function, but I have had no success. Does somebody know if there is a way to do this?

Thank you very much,
Maurizio Tomasi.
