Hi all,

This example is in the function: where_array and it is not giving the indicated output:

```
; EXAMPLE:
```

```
A=[2,1,3,5,3,8,2,5]
```

```
B=[3,4,2,8,7,8]
```

```
result = where_array(a,b)
```

```
print,result
```

```
    0    0    2    2    3    5
```

indeed, I am getting this error:

```
% Compiled module: WHERE_ARRAY.
```

```
% WHERE_ARRAY: Improper parametrs
```

```
% WHERE_ARRAY: Parameters cannot be of type Structure
```

Any idea?

Thank you.
