Hi all~ ;-)

I'm newbie in IDL.

Theseday, I'm trying to learn object graphics of IDL. I plot many spheres by means of orb object. But I can't save it to the ps file because there is only menu that enables to save image files such as bmp,jpg, etc. How can I save it to ps file?

And, how can I plot a arrow in object graphics?

Lastly, is it possible to plot various object on same window like multiplot of astron package?

Good day~

Boto
