How do I get an Alpha running PV-WAVE 4.20 to load and save Sun SRF files with write_srf.pro and read_srf.pro. All it does is produce the following message :

```
write_srf,'test',im
% Compiled module: WRITE_SRF.
% LOADCT: Loading table B-W LINEAR
% Compiled module: LONG_REVERSE.
% Specified offset to array is out of range: <BYTE    Array(4)>.
% Execution halted at LONG_REVERSE </usr/local/pvwave/wave/lib/user/long_reverse.pro( 6)>
(LONG).
%    Called from WRITE_SRF </usr/local/pvwave/wave/lib/user/write_srf.pro( 98)>.
%    Called from $MAIN$ .
```

Cheers,
David
