Allow me to recap the question

I'd like to convert the three single-banded files into a BSQ file.  
How to do it?

Go to File -> Save File As -> ENVI Standard

Click "Import File..." and select your three files. Order them as you wish with the "Reorder files" button. Note that the "File" menu I'm talking about is the one in ENVI's main menu bar, not the menu for a display window.

Cheers,  
Jeff

Thank you Jeff.

This is to save three files in bandlist into a ENVI standard.

If I would like to import three single-banded files at one step  
(because they have same nl, ns, datatype) and into a three-banded  
image. How to do it? thanks.
