Subject: Problems with the Windows IDE

Hey guys,

I have a curious issue with the IDE for Windows. When I'm debugging, sometimes the IDE will hang. I'll get my hour glass mouse cursor and it will just sit there. It remains that way until I shift my window focus to the IDL app that I'm debugging. At that point, the IDE becomes responsive again. Has anyone else run into this? Its hardly a show stopper bug, but it can be a little irksome at times.

-Steve
