
Subject: End Statement Syntax Problem

We just installed PV-WAVE 8.0 on a Windows XP box. When I try to run existing scripts that work on Unix, syntax errors come up for any END statement of ENDIF, ENDELSE, etc.

Even from the command line when I do a "wave help" command, their help script pops up syntax errors for any END* derivative. Since the PV-WAVE script errors out along with ones we made, that leads me to think it's something we did during install...any clues?

I'm pretty green wrt PV-WAVE so this is likely a quick solution, thanks in advance.

Mike
