Subject: idl license installation under debian sarge amd64
Posted by mocalvao on Tue, 06 Jun 2006 14:36:07 GMT

Hi

I have purchased a node-locked license for IDL 6.2, which I have
installed in a two-CPU Opteron running Debian sarge amd64. I am having
trouble to make the license manager be recognized after calling either
the IDL command line executable or the IDL graphic environment; the
license is not recognized and the following messages pop up after
executing, for instance, the command idl, as an ordinary user (not
root):

IDL Version 6.2 (linux x86_64 m64). (c) 2005, Research Systems, Inc.
% LICENSE MANAGER: Cannot connect to license server system.
  The license server manager (lmgrd) has not been started yet,
  the wrong port@host or license file is being used, or the
  port or hostname in the license file has been changed.
  Feature: idl
  Server name: mauricio
  License path: /usr/local/rsi/idl_6.2/../license/license.dat:/usr/
  local -
    /rsi/license/*.lic
  FLEXnet Licensing error:-15,570. System Error: 115 "Operation
  now in progress"
  For further information, refer to the FLEXnet Licensing End User
  Guide,
  available at "www.macrovision.com"..
  License file: /usr/local/rsi/idl_6.2/../license/license.dat:/usr/l
  ocal/rsi/license/*.lic
% Entering timed demo mode. Each session is limited to 7 minutes
  of operation. Printing and file saving are disabled.

  To obtain a temporary license allowing evaluation of the full
  functionality of this product contact your sales representative
  or
  RSI (303-786-9900, info@RSInc.com)

In fact, I have tried several combinations, running the license script
/usr/local/rsi/idl_6.2/bin/lmgrd. None of them worked. Could anyone
provide instructions as to how to make IDL work under Debian sarge
amd64?

Thanks!
