Funny how I can't think of Colorado with anything blooming. Every time I've been there, I've been on some mountain side in the middle of winter. :)

You've never seen those young beauties from Texas!?
You are skiing the wrong resort, my friend!

Cheers,

David

Well, I guess you appreciate them more when they come
intermittently, like my roses. :-)

Cheers,

David

Folks,

Some of you may be wondering what a discussion of roses
and beauty is doing in an IDL newsgroup, but that is
because you haven't been reading my e-mail the past few
days. What has become of the programmers who can write
beautiful, elegant, clean programs? They are almost a
dying breed, I fear, in my darker moments. The roses give
me hope. In stark contrast, I'm afraid, to my e-mail.

Cheers,

David

When elegance is vying against a tight deadline and a "just get it to work" philosophy, who do you think wins? Many programmers seem to believe that elegant, clean code takes longer to write and with deadlines getting shorter day by day, they will sacrifice elegance for "extra time" in the beginning of the process. However, the "extra time" is fools gold, because the little time saved is used later on many times over when you have to debug or maintain the inelegant solution.

My experience has been that most programmers usually don't realize the value of elegance until the code hits the fan on some project. And even then some still don't see the value to it. Programmers are never taught elegance ... they are taught algorithms, data structures and logic, but not the value simplicity, modularity, and readability. Oh, well.
