Hi.

I would to change the position of the legend in an itool.

Here is an example of what I want to do:

```
-----  
pro ilegend  
    compile_opt idl2  
    iplot, indgen(10), /no_saveprompt  
    void = itgetcurrent(tool = tool)  
    void = tool->doAction('Operations/Insert/Legend')  
    ;; Below is not valid IDL code but it illustrates what I am  
    ;; looking for  
    legend = tool->getCurrentLegend()  
    xOffset = -0.1  
    yOffset = -0.5  
    zOffset = 0  
    legend->translate, xOffset, yOffset, zOffset  
end  
-----
```

Does somebody know how to do that?

Thanks in advance.

Nicolas.
