I have geolocational graphic data.  
Those are latitude, longitude, and RGB color data.  
So, I wanna display these color data on a map.  
But, I don't know how I can do that.  
Tv function can't display geolocational data.  
And plots function can't display true color image.  
I'm in urgent situation.  
Please help me.

Thanks, David. I thought it was going to be something about this strange method of growing the stuff in the dark under heaps of soil, or about how Germans don't want to pick it these days so it's all done by Polish, or about its bizarre effects on urine, or the related discussion of the genetics of nasal function... seems there's a lot to be said about asparagus. I liked the Andechs stuff. Maybe I'll get there myself one day.

regards,  
Greg

Hi

unfortunately, the asparagus season just ended ...

as for the true colour data, our `map_image__define` routine found at <http://wew.met.fu-berlin.de/idl> can do the job.

Cheers,

Peter
