David,

The following demo program may be helpful:

ftp://ftp.ssec.wisc.edu/pub/incoming/shapefile_plot.pro

Here's how it can be used to plot a continent outline shapefile from the IDL distribution:

file = filepath(subdirectory=['resource', 'maps', 'shape'], 'continents.shp')
map_set, 43.0, -89.0, scale=50e6, /lambert, /grid
shapefile_plot, file

Cheers, Liam. Practical IDL Programming http://www.gumley.com/
