
Subject: PV-WAVE WwDrawing and Clicking

I am trying to get an application to work which will allow the user at any time to click in a WwDrawing widget and have an action executed. I have tried using WtAddEventHandler and WtAddCallback, but neither one works. Here is a sample of what I have done :

```
main = WwInit ( "test", "test", tlayout )
top = tlayout
draw1 = WwDrawing ( tlayout, 0, "Draw1cb", [ 200, 200 ], [ 200, 200 ] )

status = WwAddEventHandler ( draw1, ButtonPressMask, "ButtonPressCb"
)
```

Pro ButtonPressCB,...

```
  print, "A button has been pressed"
end
```

As you can see, this is a very simple example. It does not work.
Could someone please give some advice on what to do.

I smile because I have no idea what's going on.
